Architectural Design In Software Engineering

Architectural design is of crucial importance in software engineering during which the essential requirements like reliability, cost, and performance are dealt with. This task is cumbersome as the software engineering paradigm is shifting from monolithic, stand-alone, built-from-scratch systems to componentized, evolvable, standards-based, and product line-oriented systems.

IEEE defines architectural design as “the process of defining a collection of hardware and software components and their interfaces to establish the framework for the development of a computer system.”. The software that is built for computer-based systems can exhibit one of these many architectural styles.

Software Architecture & Design Introduction - Tutorialspoint

The software architecture focuses on the role of software components. Software components consist of a simple program module or an object oriented class in an architectural design. The architecture design extended and it consists of the database and the middleware that allows the configuration of a network of clients and servers.
