Chemical Reactor Design (Chemical Industries ...

The design of the reactor is determined by many factors but of particular importance are the thermodynamics and kinetics of the chemical reactions being carried out. The two main types of reactor are termed batch and continuous. Batch reactors. Batch reactors are used for most of the reactions carried out in a laboratory. The reactants are placed in a test-tube, flask or beaker.

Chemical reactors - Essential Chemical Industry

The reactor design was the objective of the chemical industry well before the first process design methods were developed. The first systematic approach used for optimization for reactor design is dated back in 1960 by Aris (1960).
