Overview. The Darwinian struggle of business keeps getting more brutal as competitive advantage gaps get narrower and narrower. Anything you invent today will soon be copied by someone else—probably better and cheaper. Many companies thrive during the early stages of their life cycle, only to fall slack during periods of inertia and die out while others surge ahead.

MOORE/DEALING WITH DARWIN

The must-read summary of Geoffrey Moore's book: "Dealing with Darwin: How Great Companies Innovate at Every Phase of Their Evolution". This complete summary of the ideas from Geoffrey Moore's book "Dealing with Darwin" shows that in just the same way as a Darwinian battle for the survival of the fittest occurs in the natural world, a similar kind of phenomena often arises within the marketplace. In fact, to survive and prosper, companies need to keep innovating all the time to retain a competitive advantage. The precise nature of the types of innovations which will generate the greatest returns varies as the marketplace itself changes and evolves in this way: 1) In the early stages of a new market, product leadership style innovations are highly valued. 2) Once a market reaches maturity, innovations centered around operational excellence or customer intimacy take center stage. 3) In a declining market, competitive advantage is achieved using category renewal innovations. This summary explains how companies should behave to answer these changes. Added-value of this summary: • Save time • Understand the key concepts • Increase your business knowledge To learn more, read "Dealing with Darwin" and find out why you should innovate to survive in the marketplace.

Livingstone concludes with contemporary examples to remind us that what scientists can say and what others can hear in different venues differ today just as much as they did in the past.

Geoffrey Moore is one of the most respected and bestselling names in business books. In his widely quoted Crossing the Chasm, he identified and addressed the greatest challenge facing new ventures. Now he's back with a book for established businesses that need to learn how to adapt—or suffer the slow declines into marginalized performance that have characterized so many Fortune 500 icons in recent years. Deregulation, globalization, and e-commerce are exerting unprecedented pressures on company profits. In this new economic ecosystem, companies must dramatically differentiate from their direct competitors—or risk declining performance and eventual extinction. But how do companies choose the right innovation strategy? Or overcome internal inertia that resists the kind of radical commitments needed to truly set the company's offers apart? Illustrating his arguments with more than one hundred examples and a full-length case study based on his unprecedented access to Cisco Systems, Moore shows businesses how to meet today's Darwinian challenges, whether they're producing commodity products or customized services. For companies whose competitive differentiation to the marketplace is still effective, he demonstrates how innovations in execution can help boost productivity, whether a company is competing in a growth market, a mature market, or even a declining market. For companies in danger of succumbing to competitive pressures, he shows how to overcome inertia by engaging the entire corporate community in an unceasing commitment to innovate and evolve. For any business competing in today's eat-or-be-eaten economic jungle, this groundbreaking guide shows not only how to survive, but also thrive.

An "arresting" and deeply personal portrait that "confront[s] the touchy subject of Darwin and race head on" (The New York Times Book Review). It's difficult to overstate the profound risk Charles Darwin took in publishing his theory of evolution. How and why would a quiet, respectable gentleman, a pillar of his parish, produce one of the most radical ideas in the history of human thought? Drawing on a wealth of manuscripts, family letters, diaries, and even ships' logs, Adrian Desmond and James Moore have restored the moral missing link to the story of Charles Darwin's historic achievement. Nineteenth-century apologists for slavery argued that blacks and whites had originated as separate species, with whites created superior. Darwin, however, believed that the races belonged to the same human family. Slavery was therefore a sin, and abolishing it became Darwin's sacred cause. His theory of evolution gave a common ancestor not only to all races, but to all biological life. This "masterful" book restores the missing moral core of Darwin's evolutionary universe, providing a completely new account of how he came to his shattering theories about human origins (Publishers Weekly, starred review). It will revolutionize your view of the great naturalist. "An illuminating new book." —Smithsonian "Compelling . . . Desmond and Moore aptly describe Darwin's interaction with some of the thorniest social and political issues of the day." —Wired "This exciting book is sure to create a stir." —Janet Browne, Aramont Professor of the History of Science, Harvard University, and author of Charles Darwin: Voyaging

An original, unpublished manuscript written before the Origin of Species which contains the references to journal articles and books that Darwin used in formulating his controversial ideas. This volume has been edited and annotated and includes a cross-indexing to the Origin.

"If you've ever fantasized walking and conversing with the great scientist on the subjects that consumed him, and now wish to add the fullness of reality, read this book." —Edward O. Wilson, author of Half-Earth: Our Planet's Fight for Life James T. Costa takes readers on a journey from Darwin's childhood through his voyage on the HMS Beagle, where his ideas on evolution began, and on to Down House, his bustling home of forty years. Using his garden and greenhouse, the surrounding meadows and woodlands, and even the cellar and hallways of his home-turned-field-station, Darwin tested ideas of his landmark theory of evolution through an astonishing array of experiments without using specialized equipment. From those results, he plumbed the laws of nature and drew evidence for the revolutionary arguments of On the Origin of Species and other watershed works. This unique perspective introduces us to an enthusiastic correspondent, collaborator, and, especially, an incorrigible observer and experimenter. And it includes eighteen experiments for home, school, or garden. Finalist for the 2018 AAAS/Subaru SB&F Prizes for Excellence in Science Books.

A compelling portrait of a unique moment in American history when the ideas of Charles Darwin reshaped American notions about nature, religion, science and race "A lively and informative history." - The New York Times Book Review Throughout its history America has been torn in two by debates over ideals and beliefs. Randall Fuller takes us back to one of those turning points, in 1860, with the story of the influence of Charles Darwin's just-published On the Origin of Species on five American intellectuals, including Bronson Alcott, Henry David Thoreau, the child welfare reformer Charles Loring Brace, and the abolitionist Franklin Sanborn. Each of these figures seized on the book's assertion of a common ancestry for all creatures as a powerful argument against slavery, one that helped provide scientific credibility to the cause of abolition. Darwin's depiction of constant struggle and endless competition described America on the brink of civil war. But some had difficulty aligning the new theory to their religious convictions and their faith in a higher power. Thoreau, perhaps the most profoundly affected all, absorbed Darwin's views into his mysterious final work on species migration and the interconnectedness of all living things. Creating a rich tableau of nineteenth-century American intellectual culture, as well as providing a fascinating biography of perhaps the single most important idea of that time, The Book That Changed America is also an account of issues and concerns still with us today, including racism and the enduring conflict between science and religion.
