In today's complex work world, things no longer get done simply because someone issues an order and someone else follows it. Most of us work in socially intricate organizations where we need the help not only of subordinates but of colleagues, superiors, and outsiders to accomplish our goals. This often leaves us in a "power gap" because we must depend on people over whom we have little or no explicit control. This is a book about how to bridge that gap: how to exercise the power and influence you need to get things done through others when your responsibilities exceed your formal authority. Full of original ideas and expert insights about how organizations-and the people in them-function, Power and Influence goes further, demonstrating that lower-level personnel also need strong leadership skills and interpersonal know-how to perform well. Kotter shows how you can develop sufficient resources of "unofficial" power and influence to achieve goals, steer clear of conflicts, foster creative team behavior, and gain the cooperation and support you need from subordinates, coworkers, superiors-even people outside your department or organization. He also shows how you can avoid the twin traps of naivete and cynicism when dealing with power relationships, and how to use your power without abusing it. Power and Influence is essential for top managers who need to overcome the infighting, foot-dragging, and politicking that can destroy both morale and profits; for middle managers who don't want their careers sidetracked by unproductive power struggles; for professionals hindered by bureaucratic obstacles and deadline delays; and for staff workers who have to "manage the boss." This is not a book for those who want to "grab" power for their own ends. But if you'd like to create smooth, responsive working relationships and increase your personal effectiveness on the job, Kotter can show you how-and make the dynamics of power work for you instead of against you.

From two influential and visionary thinkers comes a big idea that is changing the way movements catch fire and ideas spread in our highly connected world. For the vast majority of human history, power has been held by the few. "Old power" is closed, inaccessible, and leader-driven. Once gained, it is jealously guarded, and the powerful spend it carefully, like currency. But the technological revolution of the past two decades has made possible a new form of power, one that operates differently, like a current. "New power" is made by many; it is open, participatory, often leaderless, and peer-driven. Like water or electricity, it is most forceful when it surges. The goal with new power is not to hoard it, but to channel it. New power is behind the rise of participatory communities like Facebook and YouTube, sharing services like Uber and Airbnb, and rapid-fire social movements like Brexit and #BlackLivesMatter. It explains the unlikely success of Barack Obama's 2008 campaign and the unlikelier victory of Donald Trump in 2016. And it gives ISIS its power to propagate its brand and distribute its violence. Even old power institutions like the Papacy, NASA, and LEGO have tapped into the strength of the crowd to stage improbable reinventions. In New Power, the business leaders/social visionaries Jeremy Heimans and Henry Timms provide the tools for using new power to successfully spread an idea or lead a movement in the twenty-first century. Drawing on examples from business, politics, and social justice, they explain the new world we live in--a world where connectivity has made change shocking and swift and a world in which everyone expects to participate.

The chief executive officer (CEO) of a corporation and his or her executive team are responsible for the management of the business and its continued operating and financial success. The CEO and executive team are almost always highly compensated and the relative total compensation has mushroomed over time. Most of the compensation now is designed to be performance-based, but leading to charges that executives have incentives to manipulate corporate earnings and stock price in the short-term for their own self interests. The compensation at some companies became so egregious that compensation again became a major public policy issue subject to federal regulation. Executive Compensation focuses on the major topics related to executive compensation--present, past, and future. First, is understanding what executive compensation is, including composition and objectives of pay contracts. Second, how do specific compensation agreements affect corporate behavior and performance? Third, what are the major components, including how and what are accounted for and disclosed? How is compensation, especially executive compensation, accounted for--that is, what are the calculations and journal entries required? Fourth, what does historical analysis tell us about the topic, especially how contractual decisions have been made and what has worked. Finally, what is in store for the future--both expected compensation agreements and what the compensation incentives suggest for future corporate decisions on operations and accounting manipulation.

Modeling the dynamics of energy markets has become a challenging task. The intensification of their financialization since 2004 had made them more complex but also more integrated with other tradable asset classes. More importantly, their large and frequent fluctuations in terms of both prices and volatility, particularly in the aftermath of the global financial crisis 2008-2009, posit difficulties for modeling and forecasting energy price behavior and are primary sources of concerns for macroeconomic stability and general economic performance.This handbook aims to advance the debate on the theories and practices of quantitative energy finance while shedding light on innovative results and technical methods applied to energy markets. Its primary focus is on the recent development and applications of mathematical and quantitative approaches for a better understanding of the stochastic processes that drive energy market movements. The handbook is designed for not only graduate students and researchers but also practitioners and policymakers.

What kind of a leader do you want to become? The role of business schools in developing future managers and leaders has long been scrutinised and critiqued. This has been exacerbated by the recent financial crisis and many books have been written that condemn business schools for producing leaders who graduate without the ability to respond to the changing world around them, innovate, or act in a responsible way. By way of remedy this provocative book takes the critique and debate further, proposing a number of ethical and spiritual resources including Heiggarian philosophy, classical Greek philosophy, and the Maori notion of wairua. It explores existing teaching practices and suggests ways that business schools can: Encourage a greater understanding of different world views Introduce different perspectives such as the arts, philosophy and spirituality Encourage the practice of responsible and ethical leadership Nurture innovation and creativity. Developing Leadership is accompanied by filmed seminars exploring the central debates, and interviews with the expert team of contributors. The conversation continues at www.ethicalleadership.org.uk 'A rare thing, this book gives more than the label promises. The title is about "questions", yet each chapter gives us answers to why important issues are not addressed in business schools - and what to do about it. This is a manifesto for reform, and the next big question is what will you, reader, do about it?' - Professor Jonathan Gosling, Director, Centre for Leadership Studies, University of Exeter, UK, and Distinguished Visiting Professor of Leadership Development, INSEAD, France
