The Burning Question reveals climate change to be the most fascinating scientific, political and social puzzle in history. It shows that carbon emissions are still accelerating upwards, following an exponential curve that goes back centuries. One reason is that saving energy is like squeezing a balloon: reductions in one place lead to increases elsewhere. Another reason is that clean energy sources don't in themselves slow the rate of fossil fuel extraction. Tackling global warming will mean persuading the world to abandon oil, coal and gas reserves worth many trillions of dollars - at least until we have the means to put carbon back in the ground. The burning question is whether that can be done. What mix of politics, psychology, economics and technology might be required? Are the energy companies massively overvalued, and how will carbon-cuts affect the global economy? Will we wake up to the threat in time? And who can do what to make it all happen?

This entry level guide to baking bread at home starts by setting out the tools and equipment needed and explains the science behind the alchemy of turning flour, yeast and water into the bread we love so much. Delicious step-by-step recipes for every day include a 60-minute Soda Bread, a Half-and-half Sourdough Loaf and a Sandwich Loaf. Occasional bakes to have fun with are Puffy Pitta Pockets, Pizza Dough and Crunchy Breadsticks, whilst enriched dough sweet treats to try include Sticky Apple & Cinnamon Buns and a Chocolate & Cherry Stollen.

Following the conclusion of the latest round of reforms to the Common Agricultural Policy (CAP) in 2013, the Research Handbook on EU Agriculture Law provides an up-to-date discussion of these reforms and the changing landscape in which the CAP now operates. Adopting an interdisciplinary approach, and with international contributors from across Europe and the United States, the Handbook commences with analyses of the legal instruments which implement the reformed CAP, before moving on to consider questions of land use, the role of agriculture within the wider food chain and the international dimension. In these contexts, particular issues identified include: the environmental impact of past, present and future farming practices; the ability of the food chain to accommodate consumer preferences and scientific innovation; and the hurdles to be cleared before international consensus can be reached on a whole range of agricultural imperatives. As well as providing a state-of-the-art point of reference for academics, this comprehensive book will be of great interest to students, scholars and policymakers dealing with these new challenges faced by agriculture in the EU.

Data is getting bigger and more complex by the day, and so are the choices in handling that data. As a modern application developer you need to understand the emerging field of data management, both RDBMS and NoSQL. Seven Databases in Seven Weeks takes you on a tour of some of the hottest open source databases today. In the tradition of Bruce A. Tate's Seven Languages in Seven Weeks, this book goes beyond your basic tutorial to explore the essential concepts at the core each technology. Redis, Neo4J, CouchDB, MongoDB, HBase, Riak and Postgres. With each database, you'll tackle a real-world data problem that highlights the concepts and features that make it shine. You'll explore the five data models employed by these databases-relational, key/value, columnar, document and graph-and which kinds of problems are best suited to each. You'll learn how MongoDB and CouchDB are strikingly different, and discover the Dynamo heritage at the heart of Riak. Make your applications faster with Redis and more connected with Neo4J. Use MapReduce to solve Big Data problems. Build clusters of servers using scalable services like Amazon's Elastic Compute Cloud (EC2). Discover the CAP theorem and its implications for your distributed data. Understand the tradeoffs between consistency and availability, and when you can use them to your advantage. Use multiple databases in concert to create a platform that's more than the sum of its parts, or find one that meets all your needs at once. Seven Databases in Seven Weeks will take you on a deep dive into each of the databases, their strengths and weaknesses, and how to choose the ones that fit your needs. What You Need: To get the most of of this book you'll have to follow along, and that means you'll need a \*nix shell (Mac OSX or Linux preferred, Windows users will need Cygwin), and Java 6 (or greater) and Ruby 1.8.7 (or greater). Each chapter will list the downloads required for that database.
