Oracle Data Relationship Management (DRM) is a highly customizable and powerful Master Data Management (MDM) software platform, utilized to streamline the management of data elements in an organization. The solution provides users with the ability to manage data elements, hierarchies, and supporting data element information in a central location with integration to upstream and downstream systems. This color book, filled with screenshots and diagrams, examines the functionality of the Oracle DRM software solution, the integration points, and steps for implementation success. Project management topics from planning the implementation through to testing and maintenance are discussed, and the book provides a comprehensive reference for the user community. The Oracle Data Relationship

subject matter experts who work with the tools and techniques on a daily basis. In addition to practical cases that illustrate valuable lessons learned, the book offers:

- Undocumented Secrets—Dan Pressman describes the previously unpublished and undocumented inner workings of the ASO Essbase engine.
- Authoritative Experts—If you have questions that no one else can solve, these 12 Essbase professionals are the ones who can answer them.
- Unpublished—Includes the only third-party guide to infrastructure. Infrastructure is easy to get wrong and can doom any Essbase project.
- Comprehensive—Let there never again be a question on how to create blocks or design BSO databases for performance—Dave Farnsworth provides the answers within.
- Innovative—Cameron Lackpour and Joe Aultman bring new and exciting solutions to persistent Essbase problems. With a list of contributors as impressive as the program of presenters at a leading Essbase conference, this book offers unprecedented access to the insights and experiences of those at the forefront of the field. The previously unpublished material presented in these pages will give you the practical knowledge needed to use this powerful and intuitive tool to build highly useful analytical models, reporting systems, and forecasting applications.

Oracle Hyperion Planning is the market leading budgeting and forecasting solution

through data obstacles to provide faster, higher quality delivery of mission critical programs. Drawing upon years of practical experience, and using numerous examples and an easy to understand playbook, Lowell Fryman, Gregory Lampshire, and Dan Meers discuss a simple, proven approach to the execution of multiple data oriented activities. In addition, they present a clear set of methods to provide reliable governance, controls, risk, and exposure management for enterprise data and the programs that rely upon it. In addition, they discuss a cost-effective approach to providing sustainable governance and quality outcomes that enhance project delivery, while also ensuring ongoing controls. Example activities, templates, outputs, resources, and roles are explored, along with different organizational models in common use today and the ways they can be mapped to leverage playbook data governance throughout the organization. Provides a mature and proven playbook approach (methodology) to enabling data governance that supports agile implementation Features specific examples of current industry challenges in enterprise risk management, including anti-money laundering and fraud prevention Describes business benefit measures and funding approaches using exposure based cost models that augment risk models for cost avoidance analysis and accelerated delivery approaches using data integration sprints for
