<b>Wind in the Blood</b> is a detailed look at Mayan medicine on Mexico's Yucatan peninsula and its similarities to Chinese traditional medicine. It was originally published in Spanish as a manual for health workers in Mayan areas to bridge the gulf between Western medcal technique and Mayan medical knowledge. Mexican physicians Hernan Garcia, Antonio Sierra, and Hiberto Balam discovered that the similarities between Mayan medicine and traditional Chinese medcine were profound and helpful in their medical work. Original publication and copyright date: 2003.

Definitively tracing the evolution of the Maya civilization from the arrival of migrating 'first peoples' to the end of the Pre-Columbian Mesoamerican World with the Spanish Conquest in the 16th century AD. A span of some thousands of years are concisely covered in one volume in a thorough study of the evolution of a complex Maya society. A new world of understanding about the ancient Maya civilization has opened up from new archaeological discoveries and studies. The mystery of 'Maya Blue' revealed and an understanding of Maya Arithmetic presented in simplified ways to quickly understand the Maya system with a method to count and do math calculations using a Maya abacus or only using four fingers on each hand. Easy to read and very interesting, providing first an overview, then a chapter by chapter journey through major events in Maya history, concluding with a separated portion of highlighting major aspects in Maya knowledge and ancient ways. The Mystery of Maya Math Code is solved and simplified! Presented in a manner that is not long winded by explaining centuries of theories regarding ancient mathematics, Maya philosophy, and history. This book jumps straight into the Maya mathematical system in a simplified and easy to understand manner.

The vegan recipes in this book are based on the premise that eating whole natural foods enhances the body's innate healing abilities. Everyday Vegan inspires readers to take responsibility for their well-being by giving them knowledge and confidence in meal preparation. The book also includes kid-tested menus for nurturing a vegetarian child, explanations on how certain food components work in the body, and cleaning tips for a chemical-free home.

Scholarship on Maya healing traditions has focused primarily on the roles of midwives, shamans, herbalists, and diviners. Bonesetters, on the other hand, have been largely excluded from conversations about traditional health practitioners and community health resources. Maya Bonesetters is the first book-length study of bonesetting in Guatemala and situates the manual healing tradition within the current cultural context—one in which a changing medical landscape potentially threatens bonesetters’ work yet presents an opportunity to strengthen its relevance. Drawing on extensive field research in highland Guatemala, Servando Z. Hinojosa introduces readers to a seldom documented, though nonetheless widespread, variety of healer. This book examines the work of Kaqchikel and Tz’utujil Maya bonesetters, analyzes how they diagnose and treat injuries, and contrasts the empirical and sacred approaches of various healers. Hinojosa shows how bonesetters are carefully adapting certain biomedical technologies to meet local expectations for care and concludes that, despite pressures and criticisms from the biomedical community, bonesetting remains culturally meaningful and vital to Maya people, even if its future remains uncertain.

Definitively tracing the evolution and history of the Maya civilization from the arrival of migrating 'first peoples' to the end of the Pre-Columbian Mesoamerican World with the Spanish Conquest in the 16th century. A span of some thousands of years are concisely covered in one volume in a thorough study of the evolution of a complex Maya society. Easy to read and very interesting, providing first an overview, then a chapter by chapter journey through major events in Maya history.

This volume showcases current ethnobiological accounts of the ways that people use plants to promote human health and well-being. The goal in this volume is to highlight some contemporary examples of how plants are central to various aspects of healthy environments and healthy minds and bodies. Authors employ diverse analytic frameworks, including: interpretive and constructivist, cognitive, political-ecological, systems theory, phenomenological, and critical studies of the relationship between humans, plants and the environment. The case studies represent a wide geographical range and explore the diversity in the health appeals of plants and herbs. The volume begins by considering how plants may intrinsically be 'healthful' and the notion that ecosystem health may be a literal concept used in contemporary efforts to increase awareness of environmental degradation. The book continues with the exploration of the ways in which medically-pluralistic societies demonstrate the entanglements between the environment, the state and its citizens. Profit driven models for the extraction and production of medicinal plant products are explored in terms of health equity and sovereignty. Some of the chapters in this volume work to explore medicinal plant knowledge and the globalization of medicinal plant knowledge. The translocal and global networks of medicinal plant knowledge are pivotal to productions of medicinal and herbal plant remedies that are used by people in all variety of societies and cultural groups. Humans produce health through various means and interact with our environments, especially plants, in order to promote health. The ethnographic accounts of people, plants, and health in this volume will be of interest to the fields of anthropology, biology and ethnobiology, as well as allied disciplines.

The Kaqchikel Maya, who live in the highlands of central Guatemala, experience soul as part of a continuum of bodily states. This account of life in one highland Maya community shows how, among Kaqchikels, spirit expresses itself fundamentally through the body, and not as something entirely separate from the body. By examining the lived-meanings of midwifery, soul therapy, and community dance in the town of San Juan Comalapa, the book identifies the body as the primary vehicle for spiritual grounding in daily life. Hinojosa invites readers to understand how specialists in these activities articulate their knowledge of the spirit through their understanding of blood, and he encourages readers to glimpse the hidden life of the body and how bodily processes guide local understandings of spirit at the personal and group level. This work further ilumines the agentive role of the body in Maya spiritual experience and enriches the current discussions of Maya spiritual revitalization.

James B. Waldram’s groundbreaking study, An Imperative to Cure: Principles and Practice of Q’eqchi’ Maya Medicine in Belize, explores how our understanding of Indigenous therapeutics changes if we view them as forms of “medicine” instead of “healing.” Bringing an innovative methodological approach based on fifteen years of ethnographic research, Waldram argues that Q’eqchi’ medical practitioners access an extensive body of empirical knowledge and personal clinical experience to diagnose, treat, and cure patients according to a coherent ontology and set of therapeutic principles. Not content to leave the elements of Q’eqchi’ cosmivision to the realm of the imaginary and beyond human reach, Q’eqchi’ practitioners conceptualize the world as essentially material and meta/material, consisting of complex but knowable forces that impact health and well-being in real and meaningful ways—forces with which Q’eqchi’ practitioners must engage to cure their patients.
